Art Unit: 1771

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 1-3, 6-8, and 10-13 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over JP '195 translation (as provided by applicants with their Response), substantially for reasons set forth in Paragraph No. 5 of Paper No.120705, together with the following additional observations in view of the additional disclosure now available. Initially it is noted that the rejection now encompasses certain additional dependent claims because the enhanced disclosure present in the full translation was not previously available to the Examiner. Turning to the merits, applicants' remarks overlook the fact that the translation teaches in Paragraph [0007] a common endpoint, that is, an adhesive composition which contains 20 parts per weight of polyisobutylene per 100 parts by weight of isobutylene-isoprene copolymer, i.e. butyl rubber. Note again as evidence of the state of the art the Macromolecules 1995 Article, particularly its Abstract, which is hereby again cited since applicants have contested the fact that butyl rubber is a copolymer of isobutylene with 1-3 mol % isoprene. The fact that lesser amounts of polyisobutylene may not be effective according to the reference does not overcome the fact that the reference teaches a clearly anticipating adhesive composition, together with the remaining elements of the claimed self adhesive protective sheet.
3. Claims 5,9,14,15, and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP '195 translation, and for claims 17 and 19 in further view of EP '053, substantially for the reasons set forth in Paragraph No. 6 of Paper No. 120705,

together with the reasons set forth both in the preceeding paragraph and also presented herein. JP '195 is again relied upon substantially as set forth above, with the further observation that such parameters as coating weights, light stabilizers, and aging inhibitors are each believed to be well known to one of ordinary skill. As to claim 17, which teaches a lower, i.e. 10 wt % amount of elastomer content, and claim 19 which teaches that the polyolefin copolymer member of applicants' claim 1 Markush may be either EPM or EPDM note EP '053 as previously relied upon before, together with the disclosure at page 7, line 36, which teaches that poly alpha olefins may be used in the adhesive composition and which comprise members of applicants' claimed Markush Grouping. As to the specific weight amount of elastomer utilized this is believed to be a routine optimization for one of ordinary skill, in the absence of unexpected results.
